

December 2008

During the past five years the Pebble Project has developed a considerable volume of information of interest to state and federal agencies and the general public. Much of this has been made available previously on CDs, DVDs, and on the Web. The purpose of this DVD is to include much of this previously released information on one DVD along with the first distribution of the presentations made at the recently concluded Pebble Project Environmental Baseline Study Agency Meetings held in Anchorage in November 2008.

In addition to the 2008 Environmental Baseline Study Agency Meetings presentations, this DVD includes the 2007 Environmental Baseline Study Agency Meetings presentations, the annual field sampling plans, annual study plans, annual Quality Assurance Project Plans (QAPPs), and the progress reports that were prepared for the 2004 year only.

These files are accessible via the hyperlinks below, which will either take you to a more detailed index of the file set or directly to a folder containing the files, as applicable. Start by clicking on the presentation or document set you wish to view.

In order to review the Environmental Baseline Study Agency Meeting presentations, you will either need to have Microsoft PowerPoint installed on your computer or alternately you can install the free powerpoint slideshow viewer application available by download from Microsoft's website or available on this disk [HERE](#). Once the selected PowerPoint presentation has loaded and on your screen and the audio begins, it will be necessary for you to use your mouse or keyboard arrow keys to advance through the slides in conjunction with the audio of the presentation.
